

Benefits of Spay and Neuter

- Spaying eliminates the possibility of uterine or ovarian cancer and greatly reduces the incidence of breast cancer, particularly when your pet is spayed before her first estrous cycle.
- Neutering eliminates testicular cancer and decreases the incidence of prostate disease.
- Spaying and neutering makes pets better, more affectionate companions.
- Neutering cats makes them less likely to spray and mark territory.
- Spaying a dog or cat eliminates her heat cycle. Females in heat can cry incessantly, show nervous behavior, and attract unwanted male animals.
- Unsterilized animals often exhibit more behavior and temperament problems than do those who have been spayed or neutered.
- Spaying and neutering can make pets less likely to bite.
- Neutering makes pets less likely to roam the neighborhood, run away or get into fights.
- Animal shelters are overburdened with surplus animals. Every alteration helps.
- Stray pets and homeless animals get into trash containers, defecate in public areas or on private lawns, and frighten or anger people who have no understanding of their misery or needs.
